It has 19 branch offices spread in different parts of the country with a chain of about 1000 distributors, 4000 authorized dealers, over 400,000 retail outlets and over 282 Customer Care centers.

Challenge

eScan has a long association with Bajaj Electricals, we are taking care of IT security at Bajaj Electricals since last seven years. The existing IT infrastructure included over 600 computers connected to the corporate network through wireless and physical network, with total bandwidth of 45 MBPS available for office work and business communication. With the available resources deploying and managing endpoint security from centralized location was one of the challenges during initial phase of deployment, but with the availability of advanced options for deployment such as MWAV Agent, manual and remote deployment options, the deployment was done smoothly in just 3 days on all the computers connected to their network, without causing any interference in day to day work of the company. We are managing security on over 600 computers at several offices of Bajaj Electricals through our eScan Corporate Edition that facilitates centralized deployment of eScan client,

reporting and management of Policies and tasks through a secure web based management console on all computers connected to the network.

Mr. G. Sowmiyanarayanan, GM IT – Infrastructure at Bajaj Electricals Limited said “The benefit that we gained from eScan was the balanced solution in terms of security and cost. After deploying eScan security solution, 90% of the employee time has been saved and there is improvement in employee productivity. The dedicated engineers from eScan has done a good job by provided us a smooth service. The solution is better than what we believed it to be.”

eScan Corporate Edition – Solution at a Glance

During initial analysis of the security requirements, challenges and available resources, our engineers defined the strategy to deploy the security solution on over 600 computers at Bajaj Electricals. The deployment was done through eScan Management Console on all computers connected to the network. Security policies were configured and deployed on computers categorized on the basis of departmental needs and requirements ensuring total security from real time malware infections through regular software updates during non-working hours and installing **eScan Update Agents on client computers for local update, thus maximizing the use of available bandwidth for office work and business communications. eScan Management console is equipped with advanced reporting of security status and eScan Module activity on real time, also facilitates SIEM (Security information and Event Management) bringing strong security intelligence, rapid incident response, and seamless log management through the web based eScan Management Console. In addition to the state of the art security solution, eScan also provided 24 / 7 support through online or telephone to Bajaj electrical thus reducing FM Engineer's time and improving employee productivity by stopping system down times.

Mr. Govind Rammurthy, MD and CEO at eScan said, “At eScan, we understand that IT security has become vital and integral part of every business today. The evolving security threats lead to major losses to the affected business and most of the times the loss is irreplaceable. At eScan, our prime motto is not just to ensure business continuity, but to also enhance employee productivity by reducing the time they invest in solving the IT security issues”.

“The benefit that we gained from eScan was the balanced solution in terms of security and cost. After deploying eScan security solution, 90% of the employee time has been saved and there is improvement in employee productivity.”

**eScan Update Agents - In a large organization the Administrator can create computer groups for better management and distribution of Policies and updates. Using eScan Corporate they can install Update agent on any client computer connected to the network (where eScan Client is already installed). This update agent will take the signature updates from eScan Corporate Server and distribute the same to other managed computers in the group. The Update agent will alternatively query eScan Update servers for getting updates whenever there is a connectivity problem between the update agent and eScan Corporate Server. Thus saving bandwidth for office work and business communication.

Mr. Govind Rammurthy
CEO and Managing Director
eScan

“Mr. Govind Rammurthy, MD and CEO at eScan said, “At eScan, we understand that IT security has become vital and integral part of every business today. The evolving security threats lead to major losses to the affected business and most of the times the loss is irreplaceable.”

eScan Corporate Edition is tailor-made to ensure complete security of the IT infrastructure against the increasing number of vulnerabilities and provide effective security solution to the business that not only efficiently secure but also help manage the protection of the server and endpoints. Bajaj Electricals' security issue was alarming and had to be addressed on priority to secure the data and the network.

The Results

- ⦿ After implementing eScan there is no issue note for security breach at any level during last seven years.
- ⦿ After implementing eScan 90 % of FM engineer time got saved.
- ⦿ Improved employee productivity and no system downtimes.
- ⦿ Customer Remarks: Looking forward to implement eScan Mobile device Management at Bajaj Electricals.
