Android-based smartphones and tablets are the most popular portable computing devices being bought around. With a huge database of apps available from Google's Play Store and third-party developers, there is always a threat of it being attacked by viruses, Trojans and Malware due to fake and suspicious apps. Protecting your Android handheld is as crucial as protecting your PC because you have important data such as emails, contacts, messages and other information stored onboard. With banking and quick pay transactions being done openly using a mobile phone and tablet, securing the device is a must. eScan, from MicroWorld Software Services Pvt Ltd, is an antivirus developed for Android-based mobiles and tablets that not only protects your device from virus, Trojan and Malware threats, but also includes security features such as password protection and parental controls. Here are some key benefits of the product.
