eScan Security version 10

Microworld have released their eScan version 10 internet security product with a range of enhanced and unique security features including free automated system backup.

If you are among the many frustrated users of antivirus products that cripple your PC's performance and create headaches with their poor design, then you need to try eScan's patented and revolutionary approach to computer security.

Simple to install and manage, eScan offers powerful protection for Fileservers, Exchange servers, workstations and notebooks.

All your security needs are covered whether you are protecting a home PC or an Enterprise size network, eScan has a solution.

Features include web filtering, firewall, antispam and antivirus protection. The addition of data leakage protection via controlling USB functionality ensures extra security while simple, but effective, parental controls protect your younger web users from their own curiosity. Running a network? No problem, all of these excellent features can be centrally managed.

For added security, the technology sits in the Winsock Layer. This means that all internet and email traffic is scanned and cleaned before it even reaches the application layer, minimizing the risk of malware ever being able

to install itself. This revolutionary technology underlies the eScan product range and has brought it several certifications and awards from some of the most prestigious testing bodies including consistently attaining the coveted VB100 award.

eScan utilises very low demands on your system and memory usage. You will not even be aware that it is running until its proactive protection lets you know it is hard at work.

ESCAN ANTI-VIRUS

eScan Anti-Virus provides a comprehensive virus protection solution designed and developed to protect your computer against viruses, spyware, adware, malware, keyloggers and hackers using the unique MWL Technology and advanced AntiVirus Heuristic Algorithms.

ESCAN INTERNET SECURITY SUITE

Designed with an extra layer of security for piece of mind, the eScan Internet Security Suite includes all the security features of the eScan Anti-virus package with added

protection against spammers, phishing and objectionable content using NILP, RBL and SURBL technologies.

ESCAN ENTERPRISE EDITION

All-round AntiSpam and Content Security solution that provides Zero Day protection from Viruses, Spam, Adware, Spyware, Hacking, Keyloggers, Rootkits, Botnets, Phishing and offensive content. MailScan for MailServers provides protection from information security threats at the Mail Gateway.

MailScan

NEED AN AWARD WINNING AND AFFORDABLE EMAIL GATEWAY FOR YOUR NETWORK?
MailScan 6.1 offers protection against virus, spam and phishing mails along with comprehensive content security. The NILP technology-based on Artificial Intelligence (AI) analyzes emails based on the users behaviour patterns to prevent spam. MailScan 6.1 also has an upgraded anti-virus scan engine that checks both incoming and outgoing emails to block Malware at the MailServer before it can reach the inbox. System administrators get real-time alerts about Virus Outbreaks and spam.
