

Win Active Antivirus

While the web is packed with useful information, software and more, it also has a darker side that's packed with viruses, Trojans and spyware

TO SERVE AND PROTECT -

MICROWORLD ESCAN ANTIVIRUS

While the web is packed with useful information, software and more, it also has a darker side that's packed with viruses, Trojans and spyware. Needless to say getting online without something to protect your machine is a bad idea and that's precisely why we've joined forces with the guys from MicroWorld to give away their excellent Antivirus software suite. The software is packed full of features, the most important of which is a real time antivirus scanner. This will ensure you are actively protected from hidden threats and, even if the software doesn't have the latest virus information, it's still able to sniff out threats thanks to its Heuristic scanning technology. eScan Antivirus also boasts antiphishing, antispayware, antirootkit and antispam technology, so you can surf the web without worry. The suite even offers a firewall so your rig is protected from hackers and, if you want to track your network traffic, the software packs TCP/IP monitoring tools too. For a chance to win one of the five copies of this excellent antivirus suite, log on and answer this question:
