MicroWorld ramps up product update mechanism

Enables product updates from over 40000 servers

Tuesday, June 02, 2009

MUMBAI, INDIA: MicroWorld, a leading security solution provider, specializing in AntiVirus, AntiSpam, Content Security and Network Intrusion Prevention solutions, today announced that MicroWorld products and updates are now available through some of the fastest servers in the world.

MicroWorld has switched both its servers; update as well as download servers to Servers with Edge platform. MicroWorld's product and updates availability has increased to 40000 servers worldwide, enabling its download speed faster than before. MicroWorld is also offering its website visitors an optional light weight download manager for all downloads from their website.

These servers can detect user locations, connection speeds, browser types and other types of information for each and every content request, helping determine the most suitable server to deliver the content with the best routes and react quickly to sudden Internet outages and failures, so that user requests are always directed along the optimal route.

Govind Rammurthy, CEO and Managing Director of MicroWorld, said "MicroWorld has always been keen in offering the best services to its customers. We are glad to have Edge servers as a part of our security products enabling faster updates for our customers."

"With the launch of eScan 10, we witnessed more than 300per cent demand for our products and updates. We understand how important it is for customers to have eScan and MailScan solutions current with our security updates and so to ensure that our customers are totally secure, we have chosen the best platform available," said Sunil Kripalani, Vice-President, International Sales and Marketing, MicroWorld.
