## eScan wins Awards from AV Comparatives and VB100% again

By VARIndia Correspondent

eScan, a leading Information Security solution that provides proactive protection against viruses, spams, trojan, and many other information security threats, has again received the prestigious Three Star Award – Advanced+ from AV Comparatives for Proactive/Retrospective as well as On-demand detection of potentially unwanted applications which include Adware, Spyware and Rogue Software. eScan Internet Security Suite was also awarded VB100 certification from UK-based Virus Bulletin.

AV-Comparatives provide a three-level ranking system of Standard, Advanced and Advanced+ award to Antivirus software based on their scoring in the tests. To receive an "Advanced+" rating, a product must be rated with not only an excellent proactive detection rate, but also a low false positive rate. The retrospective test is performed using passive scanning and demonstrates the ability of the products under test to detect new malware proactively, without being executed. The PUA (Potentially unwanted Applications) tests included only program executable files and covers mainly Adware, Spyware and Rouge Software. The products were tested with the highest settings.

eScan Internet Security Suite demonstrated a high detection rate with strong scores across all sets and no issues in the Wild List or clean sets.

Speaking on this, Govind Rammurthy, Managing Director and CEO of eScan, said, "eScan continues to be one of the top vendors tested by AV-Comparatives that has consistently received the highest ranking (Advanced+) in proactive detection tests. As its impressive testing record indicates, eScan has always understood the importance of strong heuristics in fighting malware." He further added, "eScan was among the top scorers with a good detection rate in the removal of adware, spyware and rouge software."

John Hawes, Editor, Technical Consultant & Test Team Director, commented in the test bulletin, "eScan detection rates continue to impress with strong scores across all sets, and with no issues in the Wild List or clean sets and another VB100% award is well deserved by eScan."

eScan version 10, which was launched earlier this year, has won several awards, international and domestic and has received acclaim from various prestigious testing bodies of the IT security industry such as VB100%, AV Comparatives, PCSL, and many more.

Since its launch, eScan 10 has been proven to be a technologically advanced solution providing a simplified GUI, which makes it easy to operate for a novice user too. For more tech-savvy users, eScan 10 offers multi-level protection with advanced configuration controls providing enterprise-grade configurability to those who want it. eScan 10 also features real-time network activity monitor making use of a TCP viewer utility, solidly implemented high-quality main anti-malware and anti-hacking components and many additional tools.
