eScan Among the top scorers in AV Comparative Malware Removal Test

India PRwire

2009-11-10

Wins 3-Star Award for clearing all three criteria of testing

November 10, 2009 /[India PRwire](#)/ -- eScan, a leading Information Security solution that provides proactive protection against virus, spam, trojan, and many other information security threats, has received the prestigious Three Star Award - Advanced+ from AV Comparatives for Malware Removal Test.

The award for best Malware detection & removal is given to those products who surpass the following three parameters - **Removal of Malware** - the anti virus product should be able to remove the malware without leaving any traces behind, **Removal of leftovers** - According to this rule, the anti virus product must not leave any leftovers behind or at the most the leftover shouldn't be executable, **Convenience** - As per the norms of this rule, the removal process of malware should be convenient and shouldn't require a reboot of the system. Of the 16 anti virus softwares tested, eScan was among the only 2 other brands to be awarded the certificate of "Good" in all the three parameters.

Speaking on this, Mr. Govind Rammurthy, Managing Director and CEO of eScan said, "Apart from bagging most of the AV Comparative certifications, we scored the highest in the Malware Removal Test. While a high detection rate helps in finding the existing malware present in the system, it is equally important for a security solution to completely remove the Malware. Though most anti virus softwares detect & remove Malware, there is always the possibility of Malware not getting removed completely. There may remain traces of the malware like registry entries which can lead to re-infection of the system. The test result reiterates the technology powering eScan in removing all traces of Malware from an infected system."

eScan version 10, which was launched earlier this year, has won several awards, international and domestic and has received acclaim from various prestigious testing bodies of the IT security industry such as VB100%, AV Comparatives, PCSL and many more.

Since its launch eScan 10 has been proven to be a technologically advanced solution providing a simplified GUI, which makes it easy to operate for a novice user too. For more tech savvy users, eScan 10 offers multi-level protection with advanced configuration controls providing enterprise-grade configurability to those who want it. eScan 10 also features real time network activity monitor making use of a TCP viewer utility, solidly implemented high quality main anti-malware and anti-hacking components and many additional tools.

Notes to Editor**About eScan**

eScan is the world's first Real-Time Email and Webscanner for desktops and servers, developed and marketed by MicroWorld. MicroWorld Winsock Layer (MWL) is the revolutionary technology underlying the eScan product range, and bringing it several certifications and awards by some of the most prestigious testing bodies, notable among them being Virus Bulletin, Checkmark and PC Security Labs. Combining MWL technology with Multilevel Protection, eScan provides a Real-Time Proactive security to the computer systems.
