MicroWorld releases MailScan 6.1

The MailScan 6.1 precedes its earlier versions with a collection of new and advanced features

DQC NEWS BUREAU

Wednesday, April 22, 2009

Mumbai: MicroWorld announced the release of a new version of MailScan range of anti-virus, anti-spam and content security solution for mail servers-MailScan 6.1. The MailScan 6.1 precedes its earlier versions with a collection of new and advanced features.

Employing an array of filters and equipped with the NILP technology, MailScan 6.1 offers protection against virus, spam and phishing mails along with comprehensive content security. The NILP technology-based on Artificial Intelligence (AI) analyzes emails based on the behavioral pattern of the user to prevent spam. The new MailScan 6.1 also has an upgraded anti-virus scan engine that is equipped with advanced heuristic scanner that scans both incoming and outgoing emails, effectively blocking Malware at the MailServer before they reach the inbox of the recipients. MailScan 6.1 also provides real time information to the system administrators about Virus Outbreak Alerts and spam alerts.

Govind Rammurthy, CEO and MD, MicroWorld, said "Given the market conditions, one is vulnerable to internal as well as external threats. MailScan 6.1 provides superlative protection against virus, spam and phishing mails along with comprehensive content security. The unique two-way scanning function of this latest version provides the system with real-time protection with its advanced heuristic scanner, thus proving to be a great boon to novice as well as the masters in technology."
