Fax: +256-(0)4854-20221

6<sup>th</sup> July 2009

To: MicroWorld Technologies Inc. Product

I would like to express my sincere thanks to your organization for its investment in security. I use one of your products "eScan Corporate Edition for windows" serving over 150 Users. I got to know of this antivirus from a good friend Prasad at the time when my organization was facing a crisis with lots of viruses threatening to breakdown my network.

I had used several antiviruses to eradicate the problem without succeeding. From the day i started using eScan 2 to 3 years ago, i have no regrets. It's got a lot of features like system information used to track hardware and software for every machine on your network but above all, the security guarding against any intrusion is superb.

The Protection Center function stands out to me as the best management tool of all the antivirus tools. If you guard against file and mail viruses, Web, Anti-spam, privacy, End point Security and Firewall what more can you ask for.

Its one of the software that can be installed in safe mode when a machine fails to start, scan it and restores your system back to life in no time.

Its management at the server side makes your life so easy at office as an admin. I have been amazed by all the security embedded in it at no extra costs unlike other antiviruses.

It is very effective when cleaning the registry and there has been many incidences where it has proved a life saver with all these qualities.

I would certainly recommend eScan antivirus for any Corporate Customers where reliability and trustworthiness are valued.

To me it's one of the best software i have ever procured as a systems administrator because it made my work look so easy like a walk to the supermarket.

Sincerely,

Andrew Kataate
