

> Rammurthy says AV-Test test results have once again proved eScan as a reliable security solution that provides maximum protection to IT users against evolving cyber threats.

ESCAN GETS SECURITY CERTIFICATION

eScan Internet Security Suite version 14.0 receives AV-Test Certification

Anti-virus software vendor eScan has been certified by AV-Test certification for its home user product, eScan Internet Security Suite with Cloud Security. eScan has been continuously winning these certificates and proving itself as a focused, as well as an highly effective, antivirus product.

According to eScan, the AV-Test certification is an internationally recognised comparative testing process designed to assess the strength of IT security products.

Under the AV-TEST criteria, antivirus products receive scores based on the protection category, which comprises malware detection results, the performance category, which comprises average impact of security product on speed of the computer and usability category, which includes disruptions caused by false warnings, false positives and false blockages. The test acknowledges supportive and effective antivirus

products that offer best performance, which adds to setting up existing standards in the field of IT security and technology.

During November and December 2014, the test was conducted on Windows 7 (SP1, 64 bit) platform. eScan earned excellent scores for protection against malware infections (such as viruses, worms or Trojan horses) and usability.

Govind Rammurthy, MD and CEO at eScan said: "AV-Test test results have once again proved eScan as a reliable security solution that provides maximum protection to IT users

against evolving cyber threats. Mainly focused on realistic test scenarios and real-world threats, eScan Internet Security Suite effectively safeguards PCs by evading all evolving IT security threats, with minimal system impact as well as absolutely zero false warnings, false positive and false blockages."

Rammurthy added eScan Internet Security Suite with Cloud Security ensures 100% security of PC against zero-day malware attacks, web and email threats, downloading / installing the rouge software and surfing malware infected websites. The secured computing environment provided by this award winning product can be experienced from the following link: <http://update1.mwti.net/download/escan/escan14/iwn2k3ek.exe>.
