How to Create Groups in Escan Management Console (EMC)?

Please follow the below steps to create groups and deploy policies to groups:

**Step 1:** Double click on Escan Management console on the right hand corner of the taskbar shown in below screenshot.

![Escan Management Console](image)

**Step 2:** Click on “Services” menu and then click on “Normal View” option.

**Step 3** Right click on the “default” domain and click on “Add domain”

![Escan Management Console (EMC) menu with Add Domain highlighted](image)

**IMP:** “Add Domain” is equivalent to add group
Step 4: Add a group name in the “Add domain settings”

Step 5: Add escan as a group name or you can give any name this is just an example.

Step 6: This will add escan as a group.
Step 7: in the new group, you can drag and drop computer which you wish put in the eScan group

Step 8: If you want to deploy certain policy in the new group, click on “Services” menu, and then click on “Deploy Rule-sets”.

Step 9: Click on “Create new policy” like shown below.
Step 10 Give policy name as endpoint security and then click on endpoint security and then click on next
Step 11: Select escan group for deployment of the policy
Step 12: After selecting escan group for deployment of policy and then click on deploy.
This is how new policy can be deployed on the newly created groups.
