

# eScan now Compatible with Samsung S-Browser and Google Chrome

0

Posted by Suman Pokhiyal on February 28, 2014

eScan, one of the leading Anti-Virus and Content Security Solution providers, has announced that its Android-based security solutions are now compatible with S-Browser and Google chrome that comes bundled with Samsung Galaxy S4 and Nexus 7 respectively. With this, eScan has become one of the very few security solution companies, to provide protection for maximum android platforms, thus allowing the IT users to experience safe and secure browsing.

Notably, in the earlier days, most users were forced to use the default browser bundled with Android – and hence most security solutions have been implemented with this browser in mind. However, with the latest crop of expensive devices from Samsung, which is heavily promoting its own S-Browser, and Google, which has its Chrome Browser, users have been shifting use to these browsers, in order to get better performance. eScan, proactively looking at this fast shifting trend, has pioneered the usage of eScan solutions, on these web-browsing platforms.

Considering the current internet-based attacks, identity theft and the important information stolen by the cyber criminals, Smartphones and Tablets are at greater risk as similar to computers and laptops. Moreover, these devices are easy to lose and may end up being in wrong hands. With its effective features, eScan Security Solutions for Android – eScan Mobile Security for Android and eScan Tablet Security for Android delivers complete protection for Android-based Tablets and Smartphones from such kinds of threats.

eScan comes with an advanced Anti-Virus that helps eliminate, Application control feature that blocks unnecessary apps, while the Web protection feature offers protection from internet-based attacks and phishing websites. eScan comes with an intelligent Parental Control feature that helps to keep an eye on and even control online activities of children. Furthermore, eScan comprises of Anti-Theft feature that ensures complete protection to the device as well as the data stored in it from any unauthorized access, if in case the device is lost or stolen. Additionally, eScan even filters out unwanted Calls and SMSs.

Commenting on this, Mr Govind Rammurthy, MD and CEO, eScan, said, *“Mobile devices today are used in almost all the aspects of our life – be it business or personal need. Considering that Samsung is a top player in Indian markets, we are very happy that eScan is compatible with its S-Browser and Google Chrome, and hence will provide secured computing environment to IT users using these browsers. eScan Security Solutions for Android are well-tailored to fight against evolving threats and ensure protection to the important data stored in the Smartphone device.”*
