## **eScan Securing IT Infrastructure Of Bajaj Electricals Since 7 Years**

---

**—CT News Bureau**

Mumbai, March 14: Anti-Virus and Content Security Solution providers eScan has been securing the end-points of Bajaj Electricals for the past seven years. BEL is the leading electrical equipment manufacturing company.

The area of concern for Bajaj Electricals was manageability of its endpoints from central location. After implementing eScan Corporate Edition, BEL has been able to achieve minimum outbreaks and save 90 percent of the time of their employees. BEL wanted a solution for their end-points which could be managed from central location, as several data leaks were found due to weaker system structure that led to latency in manageability and support. They were even looking for central location utility for updating functional aspects.

eScan Corporate edition features eScan management console comes with a secure web interface which facilitates dynamic security management of the server and endpoints in the network. This central management interface facilitates managing, updating, supporting and configuring multiple connected end-points. It allowed Bajaj Electricals to connect approximately 600 machines and provide uninterrupted service.

Govind Rammurthy, MD and CEO at eScan said, "Bajaj Electricals' security issue was alarming and had to be addressed on priority to secure the data and the network. We are happy that we could help them resolve their issue effectively in a short span of time and continue to ensure them secured computing environment since 7 years."

G. Sowmiyanarayanan, GM IT - Infrastructure at Bajaj Electricals Limited said "The benefit that we gained from eScan was the balanced solution in terms of security and cost. After deploying eScan security solution, 90% of the employee time has been saved and there is improvement in employee productivity."
